CAPT Dickson

I spoke with my colleague Sarah Ann Moore and wanted to provide a few additional details re the NTC Boat Channel.

- \* The City as a “Potentially Responsible Party” (PRP) for the contamination that Navy cleaned up - - while Navy Litigation Office and City have exchanged a few letters over the past years, there has not been any significant developments.
- \* Focus has been Navy completing the dredging and subsequently obtaining Regional Water Board concurrence. Both are now complete.
- \* Next step is Navy BRAC preparing a Finding of Suitability to Transfer document which is anticipated to be issued next year. We expect the City to challenge the adequacy of our cleanup in their review, as they did with our environmental cleanup reports.
- \* Issuance of the FOST may also invigorate PRP discussions. However, Navy’s cost recovery efforts should be independent of the Navy’s ability to convey the property.

Sarah Ann (619-524-5727) can provide any further detail or answer any additional questions.

Good luck with PLA meeting tomorrow.

Best Regards,  
Tony
